Weiyuan Chen

Tel: （+86）13824359821 | **Email:** cweiyuan9@gmail.com

Educational Background

2021.9-2025.6 **Zhejiang University** **Bachelor's Degree in Computer Science** **Hangzhou**
CGPA: 3.87/4.0 **Rank:** top 30% **Credits Received:** 180/156
Core Courses: Theory of Computation, Advanced Data Structures and Algorithms, Computer Architecture, Operating Systems, Computer Networks, Compiler Principles
Selective Course: Computational Precision Health, Artificial Intelligence

Research

2024.9 - Present **Zhejiang University Knowledge Graph Lab (ZJUKG), supervised by Prof. Ningyu Zhang** **Intern** **Hangzhou**

- ✧ **Achieve a benchmark paper in the track of machine learning for natural language processing (NLP), to be submitted to ACL 2025 as second coauthor.**
- ✧ Develop a pipeline that fine-tunes baseline models and optimize decoding strategies to eliminate harmful generation results under jail-breaking attacks.
- ✧ Design the benchmark construction protocols using prompt-engineering techniques, including adding specified tokens to mark unsafe generation content in LLM responses under jail-breaking queries.
- ✧ Fine-tune the baseline models using parameter efficient fine tuning method and LoRA representation, based on training data consisting of jail-breaking soft-prompts and annotated responses.

2024.8 - 2024.10 **NYU NLP Lab, supervised by Prof. Chen Zhao** **Intern** **Remote**

- ✧ **Achieve a benchmark paper in the track of multimodal foundation model comprehension and evaluation, to be submitted to CVPR 2025 as fourth author.**
- ✧ Design the benchmark collection pipeline of collecting annotated questions and answers using domain knowledge and verify benchmark validity.
- ✧ Conduct case study and error analysis for LLM generation results, attributing 5 error categories and corresponding error reason for each case.

2024.3 - 2024.9 **Yale NLP Lab, supervised by Prof. Arman Cohan** **Intern** **Remote**

- ✧ **Achieve a benchmark paper in the track of model analysis and interpretability, with overall scores 4.5, 4, 4, 4 in ARR August, to be committed to ACL 2025 as second coauthor.**
- ✧ Instruct LLMs to generate ablation study designs based on an expert-annotated research context and evaluate the generation results using both human and automated evaluation.
- ✧ Design the inference pipeline and benchmark construction protocols, including restructuring a scientific paper into an expert-annotated research context and reference ablation studies.
- ✧ Implement traditional automated evaluation methods such as ROUGE, BLEU, BERTScore, and designing pointwise and pairwise LLM-based evaluation methods referencing previous literature.
- ✧ Conduct human evaluation based on specific guidelines, and error analysis to effectively explain the discrepancy between human and automated evaluation.

Projects

2023.08-2023.09 **ModelScope AIGC OpenSource Challenge** **National Third Prize** **Hangzhou**

- ✧ **Contribute 6 style models for AI-portrait generation based on modelscope/facechain project**.
- ✧ Train context feature lora models through local deployment of stable diffusion webui using pictures collected from the internet.
- ✧ Optimize prompt and parameters for AI-portrait generations utilizing prompt-engineering techniques for Large Language Model (LLM) image generation.

Honors

- Received **the National Scholarship** for the 2021-2022 academic year
- Received **First Prize** in **the 2023 National Collegiate Mathematics Competition**
- Received **a Bronze medal** at **the 34th China Mathematical Olympiad (CMO)** in 2018
- Received **First Prize** at **the 2018 and 2019 China Girl's Mathematical Olympiads (CGMO)**

Skills

- ➢ **English Level** ➢ **GRE: 330**/340 **TOEFL: 116**/120
- ➢ **Extracurricular Activities** ➢ **National Second-Level Athlete in Swimming**
  ➢ Represented Zhejiang University in multiple national, provincial championships.
